

WinSeries Voice Mail

Since 1983 Digital Speech Systems has won over 10,000 satisfied customers due to their innovative technology, unparalleled price and performance. The **WinSeries** has won industry awards and praise, for its features, reliability, and ease-of-installation/administration. Digital Speech is a fast growing company in Dallas with an entrepreneurial spirit, a dedication to service, and high performance products!

The WinSeries includes voice, fax, e-mail messaging, automatic number identification (ANI) with database integration, fax integration, as well as other features like plug & play installation, Computer Telephony Integration (CTI), automated attendant, audiotext, and Graphic User Interface (GUI) screens.

As a result, the WinSeries is easy to install, easy to use, and easy to grow with. You can add functionality as you go, so it is the perfect solution for any business or organization.

WinSeries can handle from 4 to 96 ports and has up to 1,000 hours of storage and integrates with more than 180 telephone systems. To achieve a high level of reliability, the Win16 and Win96 come standard with redundant hard drives.

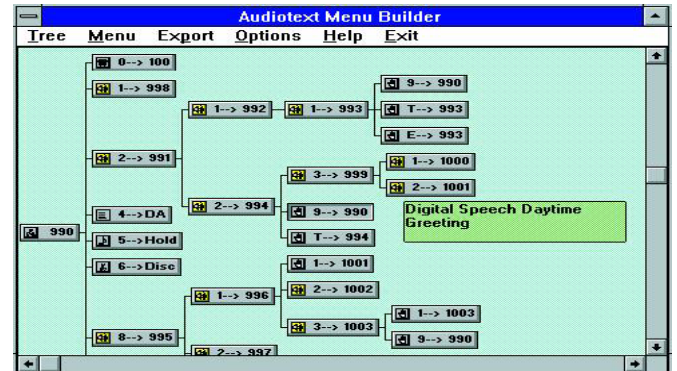

Benefit from the operating system of the future ... today.

The secret of the WinSeries high performance is its Windows 2000 operating system and application software, designed specifically for Pentium CPU's, it includes:

- 32-bit multitasking for efficient call handling and message taking
- Point-and-click system programming and administration
- Integration with Microsoft Outlook and Exchange e-mail server
- Unified Messaging combining voice, fax and e-mail messages in Microsoft Inbox

Audiotext

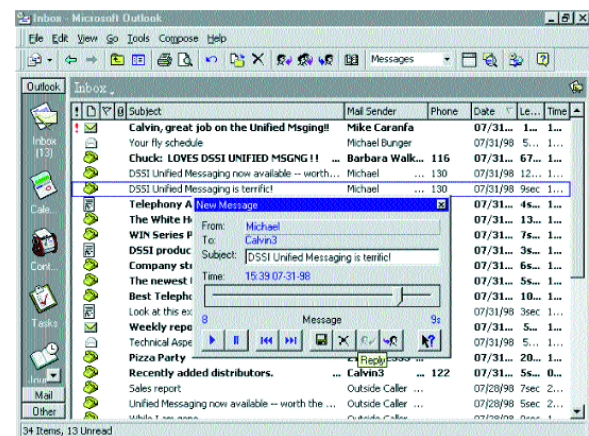

The WinSeries Audiotext serves as your "Information Center," permitting a caller to receive important facts about your company, it's products and/or services by simply pressing a touch-tone key on the phone.

In addition, it simplifies call routing, helping callers to reach your company's specific departments or services. It is an efficient way to receive verbal information.

Unified Messaging

WinSeries Unified Messaging displays all your voice, fax or e-mail messages in Microsoft Outlook Inbox.

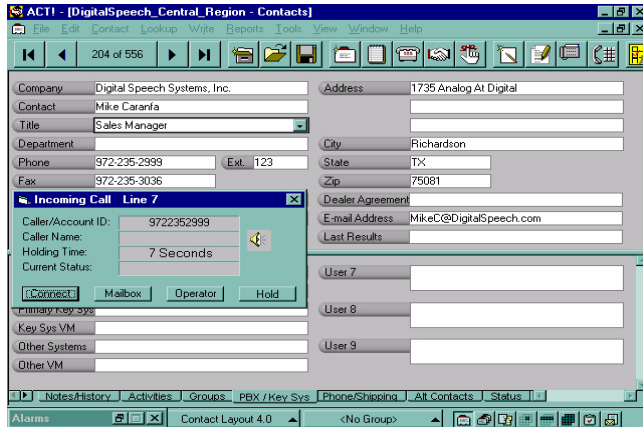

Play your voice messages ... via multimedia speakers

With a click of the mouse you can:

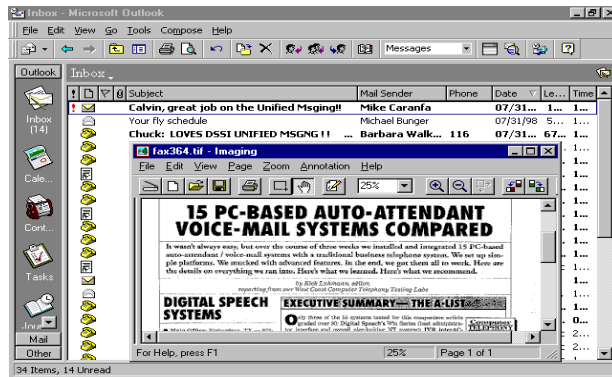

- Play the message, forward the message to someone else, delete the message
- Forward your voice messages as an e-mail message attachment to non-WIN system users.
- Hear a voice message as it's recorded

(screening), and pull the caller out of voice mail!
Look who's calling!

With Visual Call, Database Lookup, and ANI, the moment a call is received, a screen pop can display the caller's database record in Act or Outlook. Visual Call allows users to more efficiently handle multiple calls by placing them on hold with a hold message, taking the call, sending to voice mail, or sending to an operator.

Edit any received fax ... on screen!

With Visual Fax, the WinSeries lets you preview any fax message delivered to your voice mailbox and edit it on-screen.

Send a fax without leaving your desk!

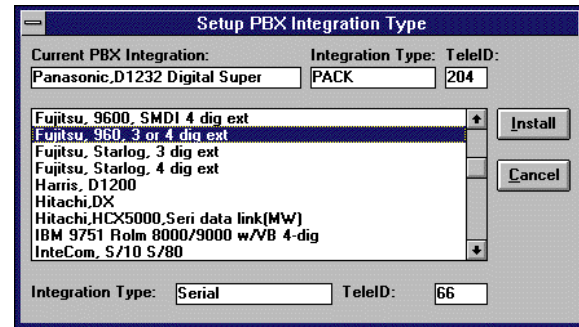

Desktop fax quickly and easily faxes any printable document!
